A two day course aimed at cardiologists,
cardiology trainees and cardiac physiologists
with an interest in cardiac pacing, including:

- Live interactive cases
- Hands on programming tutorials
- Case selection
- Echo optimisation

A live Interactive course

Invitation

The course organisers are delighted to announce the second Welsh live Implanters Course. The course is intended to be an interactive educational course covering all aspects of cardiac resynchronisation therapy; from patient selection to implantation and follow up.

The course will be structured around live implants and programming sessions, and will take place over two days. We believe that it is an interesting and lively education opportunity for cardiologists, trainees and cardiac physiologists.

Last year's course was very well received with excellent feedback from those attending. We look forward to welcoming you on 7th July
